

Hardbook SoftPLC™ Processor

Cat. No. HB4-HPLA-x

General Description

Hardbook SoftPLC's are open architecture controller CPU's that can connect to a wide variety of I/O and communication networks. Hardbook SoftPLC's are customized at the factory to application specific configurations and include hardware assembly, driver installation, system software configuration, and system level testing.

Hardbook SoftPLC models differ only in the discrete I/O capacity (see table). Analog or special purpose module I/O channels allowed are limited only by the selected hardware, not the SoftPLC. For Tealware I/O, allow for 16 discrete points for every 4 analog channels, input or output respectively based on the module type. For Allen-Bradley Remote I/O, allow for 16 discrete input points and 16 discrete output points per block transfer module.
