

Who/What is SoftPLC?

We are "SoftPLC Corporation", an automation products manufacturer. "SoftPLC" is our flagship technology, and the core of our:

- Programmable Automation Controllers (PAC / PLC)
- Gateways / Protocol Converters
- RTU's w/ Data Logging, IoT Solutions
- and more

SoftPLC's are ruggedized hardware CPU's with a powerful set of control, communication, and data handling functions. SoftPLC is NOT a Windows "PC-based control" product. Our SoftPLC's, since 1988, have been used in nearly every industry/application type - from small embedded data acquisition/remote alarming systems, to automotive / packaging / stand-alone machines, as well as complete plant-wide process control systems.

* Our Allen-Bradley PLC Migration paths are an unmatched offering - we can import old logic, connect to existing I/O and networks, etc. at lower risk/cost than anyone (*including Rockwell/Allen-Bradley*). PLC-2, PLC-5 and PLC-3 based systems are no longer supported by A-B - who is also in the process of obsoleting the SLC-500 platform.

* Our Protocol Gateways are very popular, providing more functionality at lower cost than most competitor products. Gateways are used to connect equipment from different vendors, and are very useful in staggered equipment upgrades, such as HMI's or drives without changing the PLC.

* Our IoT PAC adds an embedded headless HMI to any SoftPLC. For applications where a Smart Phone, Tablet or Laptop makes more sense than a permanently mounted HMI/touchscreen, the IoT PAC reduces cost, space, and maintenance.

* TagWell is our IoT remote monitoring platform. A link to a short video describing the TagWell platform is available on the Download

tab here: <http://softplc.com/products/comm/tagwell/> Coupled with our SoftPLC controllers/routers and gateways, and Web Studio [SCADA](#), we offer customers with remotely located or mobile equipment a terrific, low cost, flexible asset management solution.

Micro SoftPLC / RTU

Micro SoftPLC - Small in size, but not functionality!

SoftPLC's [Micro SoftPLC's](#) (Cat No SPBB-x) provides ladder logic control, data logging, email/text messages for alarming/reports, and can interface to a wide variety of other vendor's I/O and other devices. Additionally, embedded web pages provide operator interface to any browser.

Micro SoftPLC based RTU

The combination of the [Micro SoftPLC](#), our I/O board, and a modem creates a powerful, low cost RTU for applications ranging from pump/lift stations, windmills, oil wells, agriculture, remediation, weather and many others. SoftPLC's [TagWell](#) cloud platform provides connectivity via the Internet to remotely located units at up to **50% lower cost than many competitor's solutions.**
